

ASSIGNMENT 2

D.THARANI DHARAN(737819ECR205)

Build a python code to get a temperature and humidity values(generated with random function to a variable) and write a condition to continuously detect alaram in case of high temperature.

```
import random
arr1=[]
a=int(input("Enter the no.of inputs: "))
for i in range(0,a):
    m=int(input())
    arr1.append(m)
print(array)
temperature=random.choice(arr1)
humuditytemp=random.choice(arr1)
print(temp,humuditytemp)
if temp>550:
    if humuditytemp>=100:
        print("MOST DANGEROUS")
    else:
        print("HIGH TEMPERATURE")
elseif temp==400:
    print("No risk")
else:
    print("All good")
```
